

Study Tips for Finals

By: Helen Mata

CREATE YOUR OWN STUDY GUIDE

While many teachers provide a study guide, creating your own can help you understand the material better. Outlining the important information you need to learn can be helpful, both in creation and to refer to during your studies.

QUIZ YOURSELF

If you think about and create actual exam questions, you will likely become more familiar with what you need to study and familiarize yourself with the type of material that will be on the exam. Make potential exam questions and quiz yourself so that you can set expectations of what you need to focus on.

COLOR CODE IT

Create a system that allows you to color code material that's going to be on the exam by what's most important, less important, etc. This will help you focus on the most relevant information and prioritize the material.

TEACH ANOTHER PERSON

Learning by teaching is a method that really works. If you work with a study buddy and explain concepts to one another, you're re-learning the material all over again. It's a great way to reinforce what you've learned and help someone in the meantime.

USE A CALENDAR

When studying, it's easy to lose track of time and forget to prioritize. Use an app like Google Calendar to mark when your exams are.
